## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

The IDS submitted 23 February 2004, 1 July 2005, 2 July 2007, and 21 September 2007 have been considered by the Examiner.

### ***Drawings***

The original drawings received on 23 February 2004 are accepted by the Examiner.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mori et al., U.S. Patent Application Publication 2004/0018933 A1.

Mori et al. teaches an optical glass composition having overlapping ranges of components with instant claims 1, 2, and 9. See Abstract and paragraphs [0011]-[0018]. Mori et al. teaches an optical glass composition having overlapping ranges of properties with instant claims 3-7 and 10-14. See Abstract and paragraphs [0043]-[0048]. Claims 1, 8, and 9 define the product by how the product was made. Thus, claims 1, 8, and 9 are product-by-process claims. For purposes of examination, product-by-process claims are not limited to the manipulation of the recited steps, only the structure implied by the steps. See MPEP 2113. In the present case, the recited steps imply a structure of a flat glass with strengthened layers on the multiple surfaces

or an information recording layer. The reference suggests such a product. See paragraphs [0041]-[0042] and [0051]-[0060].

Mori et al. fails to teach any examples or ranges of components that are sufficiently specific to anticipate the instant claims. Overlapping ranges have been held to establish *prima facie* obviousness. See MPEP 2144.05.

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have selected from the overlapping portion of the ranges taught by the reference because overlapping ranges have been held to establish *prima facie* obviousness. See MPEP 2144.05.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Speit et al., U.S. Patent 6,303,528.

Speit et al. teaches an optical glass composition having overlapping ranges of components with instant claims 1, 2, and 9. See Abstract and column 2, line 46 to column 3, line 5. Claims 1, 8, and 9 define the product by how the product was made. Thus, claims 1, 8, and 9 are product-by-process claims. For purposes of examination, product-by-process claims are not limited to the manipulation of the recited steps, only the structure implied by the steps. See MPEP 2113. In the present case, the recited steps imply a structure of a flat glass with strengthened layers on the multiple surfaces or an information recording layer. The reference suggests such a product. See column 1, lines 17-60, column 4, lines 23-38, column 5, lines 20-40, and column 7, lines 15-29.

Speit et al. fails to teach any examples or ranges of components that are sufficiently specific to anticipate the instant claims. Overlapping ranges have been held to establish *prima facie* obviousness. See MPEP 2144.05.

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have selected from the overlapping portion of the ranges taught by the reference because overlapping ranges have been held to establish *prima facie* obviousness. See MPEP 2144.05.

One of ordinary skill in the art would expect that a glass with overlapping compositional ranges would have the properties as recited in claims 3-7 and 10-14.
